I choose Sc for Student

(a) The relation originally was not in 1NF form. As there were composite attributes of room No. After normalizing it to 1NF we get the above Normalization form.

(b) The relation is not in 2NF due to:
FD1 and FD2. Normalizing it to 2NF:

Booking Details

<u>booking ID</u>	event Name	Event Date	organizer ID
-------------------	------------	------------	--------------

Organizer

<u>Organizer ID</u>	organizer Name	organizer Contact
---------------------	----------------	-------------------

Event booking

<u>booking ID</u>	<u>organizer ID</u>	room No	capacity	equipment Name
-------------------	---------------------	---------	----------	----------------

c It is not in 3NF as there is transitive dependencies due to FD3 in Event booking.

Normalizing to 3NF:

\$ Booking Details

<u>booking ID</u>	event Name	event Date	organizer ID
-------------------	------------	------------	--------------

Organizer

<u>Organizer ID</u>	Organizer Name	Organize Contact
---------------------	----------------	------------------

Event booking

<u>booking ID</u>	<u>Organizer ID</u>	equipment Name
-------------------	---------------------	----------------

Room

<u>Room No</u>	capacity
