

BRAC UNIVERSITY
Department of Computer Science and Engineering

Examination: Quiz 1
Duration: 25 minutes

Semester: Summer 2022
Full Marks: 15

CSE 471: System Analysis and Design

Name:	ID:	Section: 04
--------------	------------	--------------------

1 **Calculate** the Break-Even Point using the following information. 3
CO1

	Year 0	Year 1	Year 2	Year 3
Total benefits	15,000	30,000	40,000	45,000
Total costs	70,000	10,000	7,000	15,000

2 Suppose a telecommunication company planning to build a Parking space finder app. **Identify** 5
CO1 3 functional requirements and 2 non-functional requirements of this project.

- 3 The question is based on the following case study. You have to **design** a use-case diagram. 7
- CO2 Your mark is distributed according to your analysis capability and depth of understanding for different actors and use cases along with their relationships.

The customer is using the NAGAD App for the bill payment system. This NAGAD App is allowing customers to login the system, check the account balance, and make payment towards bills. When a customer types his/her login information the NAGAD App is going to verify the password before completing the login process. If the login information is incorrect then the app is displaying the login error. When the customer wants to transfer funds to make a payment for the bill this app is going to make sure there is enough money to complete the transaction. When a customer wants to make a payment, the app is going to give them the option of either a merchant or agent account. When customers' wallet is empty, can add money from their bank account.
