

BRAC UNIVERSITY
Department of Computer Science and Engineering

Examination: Quiz 2
Duration: 30 minutes

Semester: Fall 2022
Full Marks: 15

CSE 471: System Analysis and Design

Name:	ID:	Section:
--------------	------------	-----------------

1 <u>CO2</u>	The activity flow of the Insights subsystem will be as follows: The user will login to the system. If the user has not authorized the system to access his/her email The application will request for authorization. If the authorization is not given the system will show a failure message and log the user out. If authorization is given then the “Insights Creation Process” is initiated and a waiting message is shown to the user. If the application has authorization, then it will check if any insights are available. If there are no insights, then a waiting message is shown to the user Otherwise the insights are shown to the user. Design the activity diagram for the Insights subsystem	7
-----------------	--	---

2
CO2

In a typical checkout process of an eCommerce store there are a number of steps involved. First, the user carts a product and then checks it out. During checkout the system checks whether the user is logged in. If the user is not logged in he needs to log in first. During login the system will verify if the user exists. If the user is verified then he/she can place the order. Before the order gets placed the system first prompts the user to enter payment details. After the user submits the details the system then sends a request containing the details to the payment gateway. The payment gateway then verifies the payment details provided by the user. If the details are verified then the order is confirmed and the system sends an 'order confirmed' message to the user. Otherwise, the system sends an order failed message to the user.

Design a Sequence diagram based on the above scenario.
