question

1

2.0/2.0 points (graded)

Which statement is false for DFD?

- ☐ A process can have multiple input and output dataflow.
- ☐ Two process can have a Dataflow between them.
- ☐ Number of input/output data flow should be same from level-1 to level-2 diagram
- ☐ All of the above
- ☒ None of the above

Submit

You have used 1 of 1 attempt

2

2.0/2.0 points (graded)

We level a DFD for -

- ☐ merging a number of simple processes in a DFD into a complex process in a new DFD
- ☐ expanding the functions of a number of external entities into simpler functions
- ☒ examining complex processes in a DFD and expanding them into new DFDs with more processes which are easy to understand
- ☐ splitting a number of data flows into simpler data flows

Submit

You have used 1 of 1 attempt

3

2.0/2.0 points (graded)

In Data flow diagram, we can represent Calculating an employee's salary as a:

☐ external agent

☒ process

☐ data flow

☐ cannot be shown in DFD

☐ data store

Submit

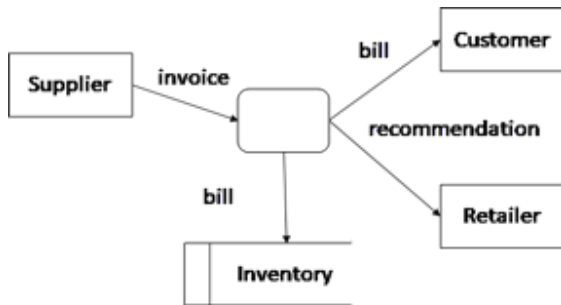

You have used 1 of 1 attempt

4

2.0/2.0 points (graded)

Which of the following statements of DFD is wrong (regarding the process)?

- ☐ The process has only one input
- ☒ Process name is not mandatory
- ☐ Process output data flows to two external entities
- ☐ The process stores a data in data store directly

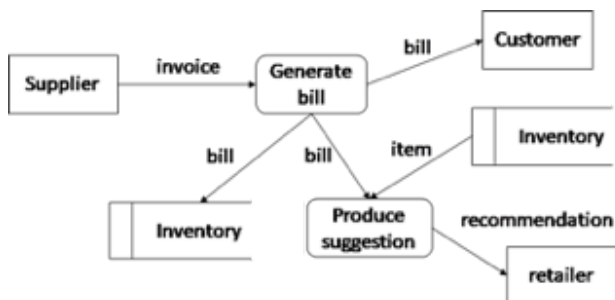

Submit

You have used 1 of 1 attempt

5

0.0/2.0 points (graded)

Suppose, we decompose the Level-1 diagram (as shown in question 4) to level-2 as shown below. Which statement is false?

- ☐ Generate bill process send bill data to another process, datastore and external agents, which is legal.
- ☐ Generate bill cannot send bill data to Produce sugession ✓
- ☒ Level 1 DFD and level 2 DFD are balanced

☐ Inventory datastore is added in level-2

Submit

You have used 1 of 1 attempt

i Answers are displayed within the problem

6

2.0/2.0 points (graded)

Which of the following is false for physical DFD?

☐ CASE repository is updated with implementation related details

☒ Functional and non-functional requirements related processes are separated

☐ Data stores, data flows and processes to handle system related functionalities are added

☐ All of the above

Submit

You have used 1 of 1 attempt

7

0.0/2.0 points (graded)

Which of the following statement is false for structure chart?

☐ Usage of generic modules multiple times is discouraged ✓

☐ Hierarchical numbering system is observed for modules

☒ Primary focus is to show higher level organization of system modules

☐ All of the above

Submit

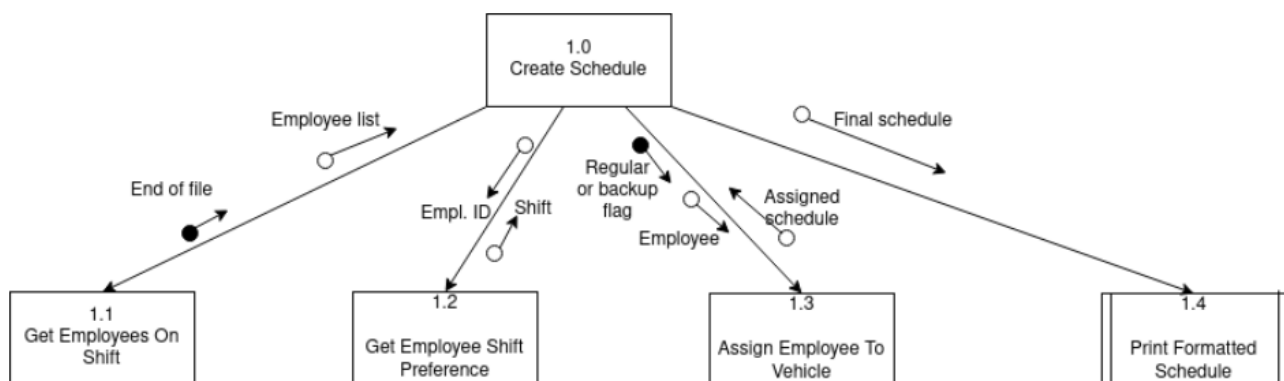

You have used 1 of 1 attempt

i Answers are displayed within the problem

8

2.0/2.0 points (graded)

Which design guideline does the following structure chart violate?

☐ Use library module generously

☐ Avoid high fan-out

☒ Control couple should be passed from called to calling module

☐ Proper hierarchical numbering should be followed for modules

☐ All of the above

Submit

You have used 1 of 1 attempt

9

2.0/2.0 points (graded)

Structure chart represents -

- ☐ Calling sequence of modules
- ☐ Module repeation
- ☐ The condition fow which a module is invoked
- ☐ None of the above
- ☒ All of the above

Submit

You have used 1 of 1 attempt

10

2.0/2.0 points (graded)

Which of the following is the worst type of module cohesion?

- ☐ Functional Cohesion
- ☐ Temporal Cohesion
- ☒ logical Cohesion
- ☐ Sequential Cohesion
- ☐ All cohesions are same

Submit

You have used 1 of 1 attempt
