Volumetric

0.0/4.0 points (graded)

Database Volume estimation - 5 marks

Consider a RDBMS team is working to store the records of a newly established school in your area. They have identified the id (10), name (58), mobile (58), guardian's email (22) and address (25) as the fields of records. Considering an overhead of 12% on data volume with initial 637 records and a growth rate of 1124 records per month, calculate the expected volume of the database table in 5 years.

The values enclosed by the first bracket indicated the sizes of corresponding fields.

No need to roundup or precision your answer. Just put the actual value.

14132785.2

✗ Answer: 13190599.519999998
