Multiple Choice

1 point possible (graded, results hidden)

Suppose, the CPU wants to communicate with a device and send 5 frames of data using the I2C protocol. What is the total number of Acknowledgement Signals the device would send the CPU throughout this communication?

☐ 5☒ 6☐ 7☐ 4[Submit](#)

You have used 1 of 1 attempt

 Answer submitted.

Multiple Choice

Multiple Choice

1 point possible (graded, results hidden)

Suppose, a data frame of 8 bit is being sent using the UART protocol where the start bit (0), parity bit and stop bit (1) are 1 bit each. Which of the following packets does not have any error?

☐ 01100110001☒ 01111111111☐ 01010100011☐ 01100001101[Submit](#)

You have used 1 of 1 attempt

 Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

If we want to build a project where we use 3 arduinos to control all the devices, which communication protocol would be most suited for the project?

☐ UART☐ SPI☐ SCL☒ I2C[Submit](#)

You have used 1 of 1 attempt

 Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Which of the following statements are True for UART

☐ The data is transferred between devices using Parallel Transmission☐ Data frame size is limited to maximum 11 bits☒ No clock signal is needed☐ None of the above.[Submit](#)

You have used 1 of 1 attempt

 Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Suppose, you want to stream data continuously from a sensor without any interruption. Which of the following communication protocols would you use?

☐ I2C

☒ SPI

☐ UART

☐ Asynchronous

Submit You have used 1 of 1 attempt

i Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

In the UART protocol, where are the additional bits (start, parity, stop) removed from the actual data?

☐ In CPU

☐ In databus

☒ In Receiving UART

☐ In Transmitting UART

Submit You have used 1 of 1 attempt

i Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

If we connect 8 devices with arduino, how many wires would be needed if we want to establish communication between the microprocessor and the devices using SPI protocol?

☒ 11

☐ 10

☐ 8

☐ 9

Submit You have used 1 of 1 attempt

i Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Which protocol uses only one wire to send and receive data between the CPU and a device?

☐ SPI

☐ UART

☒ I2C

☐ Asynchronous

Submit You have used 1 of 1 attempt

i Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Which of the following is true for asynchronous transmission:

☒ Both sender and receiver does not have to be present at the same time

☐ It is used if security is a concern.

☐ It is expensive to implement.

☐ The sender maintains the synchronization

Submit You have used 1 of 1 attempt

i Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Suppose during a UART transmission the parity bit is 1 and there are six 1s' as data bits. Which of the following is true?

☐ The transmission is successful.

- ☐ The transmission is successful.
- ☐ The transmission is unsuccessful because the baud rate is mismatched.
- ☐ The receiver received the right data and processed it accordingly.
- ☒ The receiver received faulty data which might have been changed through EM radiation.

Submit You have used 1 of 1 attempt

Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

What is the maximum number of signal bits that can be added to a dataframe during UART transmission?

- ☐ 2
- ☐ 3
- ☒ 4
- ☐ 5

Submit You have used 1 of 1 attempt

Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Which of the following is the only protocol that supports Multi-Master Multi-Slave communication?

- ☐ SPI
- ☒ I2C
- ☐ UART
- ☐ SCI

Submit You have used 1 of 1 attempt

Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

Which of the following is true for I2C transmission?

- ☐ It uses asynchronous transmission.
- ☐ It has a line to select slaves.
- ☐ It does not support Acknowledgment.
- ☒ It has a special addressable scheme to communicate with slaves.

Submit You have used 1 of 1 attempt

Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

During an I2C transmission, if a particular slave signals its presence with the master then the slave:

- ☐ Pulls the SDA line high for 1 bit.
- ☐ Changes the R/W bit to 0
- ☒ Pulls the SDA line low for 1 bit.
- ☐ Changes the R/W bit to 1.

Submit You have used 1 of 1 attempt

Answer submitted.

Multiple Choice

1 point possible (graded, results hidden)

If an I2C uses a 7 bit addressing scheme, what is the maximum number of slaves that can be connected with the master?

- ☐ 256
- ☐ 127

☐ 126

☒ 128

Submit

You have used 1 of 1 attempt

 Answer submitted.
