Customer Relationship Management (CRM) software allows B2C businesses to maintain relationships with their customers by providing a platform on which the customer can directly communicate with a business representative or vice versa. The image below shows a small part of the physical model. State what is the mistake in it.

- ☐ The id has to be of integer format instead of uuid
- ☐ The Employee_id in the Representatives table has to be of integer type
- ☒ The diagram is a logical model and not a physical model because it can be further optimized
- ☐ There is nothing wrong with the shown physical model

Bangladesh Bank wants to have a system developed so that they are better able to track all monetary transactions and financial status of the country. The main objective of the system is to provide sufficient information to the top executives in order to help them figure out what kind of policy to implement to control the rate of inflation of the country. Your company was selected to build this system, and after performing all the groundwork, now it is time for you to select a storage format. Which would be the best format to use and why?

- ☐ Files, because they support simple data structures and can be used for transaction processing
- ☐ Relational DBMS, because they support simple data structures and help in decision making
- ☐ Object Oriented DBMS, because they support complex data structures can be used for transaction processing
- ☒ Multidimensional DBMS, because data warehousing needs to be implemented and it can be used for decision making
