Multiple Choice

2 points possible (graded, results hidden)
XYZ is a software company which has a developer team and an operations team. Recently they have implemented the DevOps method in their software development process. This resulted in an increased coordination between the two teams. They are able to fix bugs and push updates to the operations team faster. As a result the operations team is able to deploy the updates very fast as well. But still the customers have a lot of complaints regarding the instability of the software which are not being tracked properly. Which part of DevOps are they missing here?

- ☒ Continuous Monitoring
- ☐ Continuous Integration
- ☐ Continuous Deployment
- ☐ Continuous Development
