problem

1.0/1.0 point (graded)

Which of the following is not a part of the CSP terminology ?

☐ Variables

☒ Range

☐ Domain

☐ Constraints

Submit

You have used 1 of 1 attempt

Show Answer

problem

1.0/1.0 point (graded)

Backtracking extends which of the following searching techniques?

☒ Depth-First Search

☐ A* Search

☐ Hill Climbing Search

☐ None of the above

Submit

You have used 1 of 1 attempt

Show Answer

problem

1.0/1.0 point (graded)

Find the one which is not included in the solution of a CSP problem.

☐ Most Constraining Variable

☒ Least Constraining Variable

☐ Most Constrained Variable

☐ Least Constraining Value

Submit

You have used 1 of 1 attempt

Show Answer

problem

1.0/1.0 point (graded)

Consider that in a CSP problem, you have four unassigned variable A, B, C, D. You can assign the values {1, 2, 3} to A, {2} to B, {3, 4} to C, {1, 3} to D. Which variable should you pick to assign value at this point?

☐ A

☒ B

☐ C

☐ D

☐ Any one of four is fine

Submit

You have used 1 of 1 attempt

Show Answer

problem

1.0/1.0 point (graded)

What can you use to reduce the need of backtracking in constraint satisfaction problem?

☐ Forward Searching

☒ Constraint Propagation

☐ Backtrack after a forward search

☐ Omitting the constraints and focusing only on goals

Submit

You have used 1 of 1 attempt

Show Answer

problem

1.0/1.0 point (graded)

At a certain step of a CSP algorithm, if the unassigned variables have possible remaining values such as - $V1 = \{1, 2\}$, $V2 = \{3\}$, $V3 = \{4, 5, 6\}$, $V4 = \{2, 3, 5\}$, which variable will be chosen according to the "most constrained variable" heuristic for the next step?

☐ V1

☒ V2

☐ V3

☐ V3 and V4

Submit

You have used 1 of 1 attempt

Show Answer

problem

1.0/1.0 point (graded)

Which of the following statements are false ?

☒ Backtracking alone finds optimal solution

☐ Arc consistency generally detects failure earlier than the node consistency method.

☐ In case of a tie we chose the node which imposes most constraints on other nodes.

☐ Theoretically we can solve CSP using GA.

Submit

problem

1.0/1.0 point (graded)

Suppose in a CSP problem, a unary variable, $V1$, needs to be a divisor of 60. Choose which of the following constraints you can impose on $V1$.

☒ $60 \% V1 = 0$

☒ $V1 = \{1, 2, 3, 4, 5, 6, 10, 12, 15, 30, 60\}$

☐ $V1$ is even

☐ $V1$ can be either even or odd

☐ $V1 = \{120, 180, \dots\}$

Submit

Show Answer

problem

1.0/1.0 point (graded)

Which of the following statements are true?

☐ Forward Checking detects failure earlier than Arc Consistency

☒ If any of the variable has no legal values, terminate forward checking

☐ Arc Consistency detects failure later than Forward Checking

☒ Forward checking records remaining legal values for unassigned variables

☒ Arc Consistency detects failure earlier than Forward Checking

Submit

You have used 1 of 1 attempt

Show Answer

problem

0.5/1.0 point (graded)

Which of the Following problems can be modeled as CSP?

☐ Crossword puzzle ✓

☐ Edit distance problem

☐ Alignment problem

☒ 8-Queen problem *

☒ Sudoku *

*
