Multiple Choice

3.0/3.0 points (graded)

	Right Handed	Left Handed	Total
Male	0.41	0.08	
Female	0.45	0.06	
Total			1

Based on the table given above, answer the questions Q1-Q3

Q1. What is the joint probability of a person being Male and Right Handed?

☐ 0.45

☒ 0.41

☐ 0.43

☐ 0.08

Q2. What is the conditional probability of a person being right handed given Female?

☐ 0.45

☐ 0.52

☒ 0.88

☐ None of the above

Q3. What is the marginal probability of a person being left handed?

☒ 0.14

☐ 0.08

☐ 0.51

☐ 0.49

Submit

Multiple Choice

1.0/1.0 point (graded)

Suppose you have an unfair dice where $p(\text{head}) = 0.7$. Now if you flip the coin 3 times, then what is the probability of getting head, then tails and then head again?

☐ 0.121

☐ 0.135

☐ 0.125

☒ 0.147

Submit

Multiple Choice

1.0/1.0 point (graded)

Suppose you have three events A, B and C. Now if all three of these events can never occur together, then find the value of $p(A \text{ and } B | C)$

☐ 0.4

☐ 0.33

☐ 0.5

☐ 1

☒ None of the above

Submit

Show Answer

Multiple Choice

1.0/1.0 point (graded)

If A and B are independent and $P(A) = 0.3$, $P(B) = 0.7$. What is the joint probability of A and B?

☐ 0.23

☒ 0.21

☐ 0.42

☐ 0.10

Submit

You have used 1 of 1 attempt

Show Answer

Multiple Choice

1.0/1.0 point (graded)

If you flip a coin and roll a dice at the same time, what is the probability of getting a head in the coin and 6 in the dice?

☒ 0.0833

☐ 1/6

☐ 1/2

☐ None of the above

Submit

You have used 1 of 1 attempt

Show Answer

Multiple Choice

1.0/1.0 point (graded)

In a joint probability distribution table for 4 variables (A, B, C, D), how many entries will there be?

☐ 4

☐ 8

☒ 16

☐ 32

Submit

You have used 1 of 1 attempt

Show Answer

Checkboxes

0.0/1.0 point (graded)

Consider an event of rolling a dice. Now tell which of the following statements is true? (Multiple correct answers possible)

☐ Sum of probabilities of getting an even number and an odd number is 1 ✓

☒ event of getting an odd number and getting 3 are independent events

☐ Two dice are thrown simultaneously. The probability of getting two numbers whose product is even is $3/4$. ✓

☒ probability of getting a prime number if a dice is thrown is $1/2$. ✓

☐ probability of getting a 2 is $2/6$.

Submit

Checkboxes

0.5/1.0 point (graded)

Which one of the following are true? (Multiple correct answers possible)

☒ $P(A) = 1 - P(A^c)$ *

☐ $P(A) = P(A \text{ and } B) + P(A \text{ and } B^c)$ ✓

☐ $P(A) = P(A|B) + P(A|B^c)$

☒ $P(A) = P(B \text{ and } A) / P(B|A)$ *

☐ $P(A) = P(A \text{ or } B) - P(A \text{ and } B) - P(B)$

*
