

BRAC UNIVERSITY
Department of Computer Science and Engineering

Examination: Quiz 1
Semester: Summer 2024

Duration: 35 min
Full Marks: 15

CSE 470: Software Engineering

Name:

ID:

Section:

Set-A

1.

Long ago, there were some nations that lived together in harmony. They were always ready to do anything to live together happily. They protected each other using their own power. Fire nations who represented life and energy with fire, bodyguard, weapon and their powers were manipulation of fire, emphasizing power and aggression. Another nation was earth who were famous for rocks and stability using earth, weapons and manpower. Their powers were Control over earth, symbolizing strength and endurance. Besides, the Water Tribes, guardians of the world's balance, wielded the power of waterbending, a skill that epitomized adaptability and healing, harnessing the fluid essence of water to protect and sustain life across the globe. Last but not least, the Air Nomads were renowned for their mastery of airbending, a practice that cherished freedom and harmony, skillfully channeling the element of air to navigate and preserve peace within the world. And finally there was another nation who were the master of all those nations and could bend all those elements, tasked with maintaining balance and peace were called avatars. But everything changed when the Fire Nation invaded. Only the Avatar, master of all four elements, can stop them. But when the world needs him most, he vanishes. A hundred years later, the new Avatar was discovered, an airbender named Aang. Together they must help Aang master the elements and save the world. [7 marks]

2.

Hardy, Manu, and Buggu planned to visit London after poor ILETS scores. Unable to obtain visas due to poor results, they decided on an illegal route to London via the Dunki route. They met with an agent who provided them with instructions on how to reach England. After discussing the plan, they prioritized the route, their route initiated with Pakistan, leading to Afghanistan. They then opted for a truck through Iran, a train across Turkey, and finally a ship to England. They documented this plan in their to-do list. Starting in Pakistan, they crafted a new checklist to anticipate potential obstacles. Each evening, they briefly discussed progress, estimated travel times, and anticipated challenges for the next day of their journey. They tracked progress with a map and celebrated reaching each destination with a party to share achievements. This continued until they reached England. Developing an app for adventurous travelers on the Dunki route, inspired by Hardy, Manu, and Buggu's journey. The app contains a

map for route visualization and shortest path guidance. An AI tracks journey progress and alerts users of potential dangers. Ensuring smooth performance under all conditions, the app is encrypted to safeguard plans from adversaries. Above all, it prioritizes user-friendly design for ease of use. For the development of this application they decided to follow the methodology used by Hardy, Manu and Buggu.

- A. According to the scenario, what methodology they are following? **[1]**
- B. Explain the detailed implementation process of the chosen methodology **[4]**
- C. Find out 2 functional and non-functional requirements from the given scenario.**[3]**
