

BRAC UNIVERSITY
Department of Computer Science and Engineering

Examination: Quiz 1
Semester: Summer 2024

Duration: 35 min
Full Marks: 15

CSE 470: Software Engineering

Name:

ID:

Section:

Set-B

1.

Long ago, there were some nations that lived together in harmony. They were always ready to do anything to live together happily. They protected each other using their own power. Fire nations who represented life and energy with fire, bodyguard, weapon and their powers were manipulation of fire, emphasizing power and aggression. Another nation was earth who were famous for rocks and stability using earth, weapons and manpower. Their powers were Control over earth, symbolizing strength and endurance. Besides, the Water Tribes, guardians of the world's balance, wielded the power of waterbending, a skill that epitomized adaptability and healing, harnessing the fluid essence of water to protect and sustain life across the globe. Last but not least, the Air Nomads were renowned for their mastery of airbending, a practice that cherished freedom and harmony, skillfully channeling the element of air to navigate and preserve peace within the world. And finally there was another nation who were the master of all those nations and could bend all those elements, tasked with maintaining balance and peace were called avatars. But everything changed when the Fire Nation invaded. Only the Avatar, master of all four elements, can stop them. But when the world needs him most, he vanishes. A hundred years later, the new Avatar was discovered, an airbender named Aang. Together they must help Aang master the elements and save the world. [7 marks]

2.

During the winter trip to climb Mount Everest, Bob and Alice spoke with their trainer and noted everything about all the checkpoints on a sheet of paper. They maintained another sheet of paper for important points at each checkpoint. At the end of each day, they set up camp and discussed their achievements for that day, along with the challenges they might face the next day and those they encountered that day, as well as the distance they covered. After reaching each checkpoint, they held a feast, and shared their achievement with other climbers. They also maintained a map to track their progress. This continued until they reached the peak of Mount Everest.

After the winter trip, Alice and Bob were given the task of developing a Learning Management System (LMS). Here, learners can enroll in courses based on their job roles. Instructors can upload educational videos or articles. Learners can attend monthly quizzes to test their knowledge. Alice and Bob need to ensure that the application runs smoothly on both old and

new devices. Most importantly, user data should be secured from different cyber attacks, and the application should be easy to update with new features in the future. For the development of this application they decided to follow the methodology they used during their winter trip.

- A. According to the scenario, what methodology they are following? **[1]**
- B. Explain the detailed implementation process of the chosen methodology **[4]**
- C. Find out 2 functional and non-functional requirements from the given scenario. **[3]**
