Examination: Quiz 3
Semester: Summer 2024

Duration: 25 min
Full Marks: 15

CSE 470: Software Engineering

Name:

ID:

Section:

Set-A

At the NorthEnd Espresso Shop, customers have the benefit of purchasing espresso coffee beans. The shop offers a diverse range of coffee beans in packets. When placing an order, customers can choose the desired quantity of packets, and the total price of the order, including sales tax and shipping fee, is calculated accordingly. If Espresso Shop does not have the complete customer order in stock, it will divide the order into multiple shipments. The shop promptly ships the available packs and ensures that the remaining packs are dispatched as soon as the inventory is restocked. Notably, regardless of the number of shipments required to fulfill an order, the customer is charged a single shipping fee. To facilitate seamless transactions, customers are given the option to pay via credit card. For every order placed, the shop collects the customer's credit card information along with the shipping address. Before each shipment, the shop will charge the customer's credit card for the beans being shipped. It's important to note that the shipping fee is included in the charge for the first shipment of an order. In order to effectively manage their inventory, the owners of the Espresso Shop maintain detailed information about the stock of Espresso beans packs. On a monthly basis, a comprehensive report is generated, summarizing the number of packs ordered within the last month. This report provides valuable insights into the demand and sales trends of different coffee varieties.

A. Provide a use-case diagram for the requirements of the Espresso Shop.
